

With so much emphasis put on the negative past of airdrops, we've figured it's high time for some changes to be made. Yes, airdrops were mostly used to fish in new investors in pyramid schemes, but this is because of the limited blockchain technology at the time.

Now, almost a decade later, things really look different. Rewardstoken has taken several key steps to ensure that its airdrop system will offer many different options and gains for new investors. With the scaling system, investors will now be able to decide whether or not to cash in their airdrop tokens instantly for rewards that could be well worth hundreds of dollars in the future. The scaling system allows for a large variety of possibilities since the price of the token can change rapidly in the future.

With the 1.5x scaling, things will look way different in a noticeable price increase. Users however, have the freedom to hold the tokens, which is also contrary to the previous history of airdrops. When the non-US system was introduced, this also changed a lot of the developers' initial ideas and the scaling had to be redone in order to compensate for the time that was "lost".

Needless to say, the scaling system provides infinite possibilities. Changing a lot of the paragraphs of original airdrops. With the upcoming systems from Rewardstoken, this airdrop system can be expanded into a wide variety of tokens and different types of scaling. Since the scaling system is still rather new, it can take some time for it to gain popularity. However, the possibilities of the scaling airdrop system are endless.
